The environmental consultants
with 25+ years of experience

Resource Efficiency

Understanding and measuring your resource use is the key to resource efficiency.

We can help you through this process by:

- Analysing consumption and production data
- Conducting a full on-site audit
- Preparing a detailed Action Plan showing how to implement opportunities

We have experience in all areas of resource use:

Energy - heating, lighting, HVAC, steam systems, monitoring and mapping

Water - flow reduction and usage minimisation

Waste - mapping and minimisation

Transport - fleet management

Raw Materials - process mapping and minimisation

Renewable Technologies

We can conduct a feasibility study for you on any renewable technology you are interested in. This will include suitability, as well as a forecast of fuel savings and potential income generation. We can review existing quotes, as well as recommend trusted suppliers to complete your installation.

Green at Heart Award

There is increasing demand for companies of all sizes to demonstrate that they take their environmental responsibilities seriously, and are trying to reduce their environmental impact.

In order to help companies answer this demand, we offer the Green at Heart Scheme. This is a straightforward system for identifying opportunities for environmental improvements, cost savings and targets for future improvement.

When joining the membership scheme, you'll receive a full environmental audit on your company, an assessment on how to achieve improvements, impartial advice across a whole range of environmental/resource efficiency issues, plus your first year certificate.

You will have access to the well known Green at Heart branding to use across your marketing tools as well as free telephone support from your auditor.

Members will receive the quarterly CBEN Newsletter, plus access to a range of member events organised by CBEN throughout the year!

About Us

CBEN Partnership is an independent environmental consultancy providing professional environmental advice and bespoke solutions to the business community.

We specialise in:

- Resource & Environmental Management
- Energy Saving Opportunity Scheme (ESOS) compliance assessment
- ISO 50001 Energy Management System development
- ISO 140001 Environmental Management System implementation and auditing
- Green at Heart environmental awards scheme

Our environmental and energy consultants have 25+ years experience helping companies identify and implement environmental improvements and cost saving ideas. As a result, we have helped clients increase profits, improve efficiency and create new employment opportunities.

You'll find us friendly, helpful and resourceful as we work with you to improve your business!
